Summary

- Senior Salesforce Developer with 4+ years of experience designing, developing, and delivering scalable Salesforce solutions for enterprise clients.
- Strong expertise in Apex, Triggers, Batch Apex, Queueable Apex, Lightning Web Components (LWC), Visualforce, SOQL, SOSL, and Salesforce Flows, with a focus on building efficient, reusable, and maintainable solutions.
- Hands-on experience with Salesforce CPQ, including Product Configuration, Product & Price Rules, Pricebook Management, Quote Templates, MDQ (Multi-Dimensional Quoting), Multi-Year Pricing, Renewals & Amendments, Subscription Products, Order & Contract Management, and pricing automation for complex business requirements.
- Extensive experience integrating Salesforce with external applications using REST APIs, Apex Callouts, Named Credentials, and secure authentication mechanisms, enabling seamless data exchange with third-party and AI/LLM platforms.
- Proficient in developing responsive Lightning Web Components, implementing custom business logic, optimizing Salesforce automation, troubleshooting CPQ and production issues, and performing root-cause analysis to improve system performance and user experience.
- Experienced in the complete Software Development Life Cycle (SDLC), including requirement analysis, solution design, development, unit testing, deployment, production support, and Agile delivery using JIRA and ASANA.
- Strong client-facing experience collaborating with business stakeholders to gather requirements, provide technical estimations, design scalable solutions, and successfully deliver high-quality Salesforce implementations.
- Developed AI-powered integrations using external LLM APIs and explored AI-assisted development tools to enhance Salesforce solutions and development productivity.

Technical and Functional Skills

• Apex Classes • Triggers • Test Classes • Batch Apex • Queueable Apex • Scheduled Apex • Lightning Web Components (LWC) • Visualforce • SOQL • SOSL • REST API Integrations • Apex Callouts • Named Credentials • Salesforce Flows (Screen, Record-Triggered & Autolaunched) • Sales Cloud • Service Cloud • Salesforce CPQ • Quote-to-Cash (Q2C) • Quote Templates • Price Rules • Product Rules • Product Configuration • Product & Pricebook Management • Discounting & Pricing Automation • MDQ (Multi-Dimensional Quoting) • Multi-Year Pricing • Renewals & Amendments • Subscription Products • Renewal Opportunities • Order & Contract Management • Quote Approval Processes • CPQ Document Generation • AI/LLM Integrations • Salesforce Administration • Deployment (Change Sets, SFDX) • Data Migration • Business Requirements Gathering • Solution Design • Production Support • Root-Cause Analysis • Agile Methodologies • JIRA • Confluence • Postman • VS Code • Git/GitHub • JavaScript • HTML • CSS • Claude • Cursor

Professional Experience

Bluvium - February 2025 to Till Date

Project: Celona Salesforce Implementation

Client: Celona

Role: Salesforce & CPQ Developer

Duration: 8 Months

- Used AI for org health checks and carried out optimization for several areas.
- Analyzed and modified flows controlling Quote, Opportunity, Order and renewal behavior, including before-save/after-save automation and conditions.
- Worked on the CPQ custom flow optimization and product configuration in the org.
- Developed Apex triggers, Batch classes and corresponding test classes to implement business logic.
- Fixed errors in old automations and optimized the automations.
- Built responsive Lightning Web Components (LWC) for custom business processes.
- Integrated Salesforce with third-party applications using REST APIs and Apex callouts.
- Managed client interactions independently, running requirement discussions with stakeholders and managing delivery processes.
- Performed CPQ data migration for overall configurations and automation.

Project: Valimail Salesforce Optimization

Client: Valimail

Role: Salesforce Developer

Duration: 8 Months

- Used AI for extensive data check and reduced delivery timelines without affecting the quality.
- Debugged MDQ calculations, yearly segmentation, discounts, pricing, and Apex logic around MDQ quote lines.
- Worked with custom Apex controllers and pricing/order-form logic, including MDQ calculations and document-generation logic.
- Worked on Renewals, Amendments, and Order Management processes for their CPQ implementation.
- Developed Apex triggers, custom scripts and corresponding test classes to implement business logic.
- Managed deployments using Change Sets, ensuring adequate test class coverage for successful migration.
- Developed and maintained Visualforce pages for custom functionality.
- Worked with quote templates and order-form generation, including investigating why different users see different template behavior and how deployed/locked templates behave.
- Managed client interactions independently, running requirement discussions with stakeholders and managing delivery processes.
- Used Git/GitHub for version control and collaborative development.

Project: FloXplorer

Client: Bluvium

Role: Salesforce AI Developer

Duration: 2 Months

- Worked on Agentforce for integration with Slack.

- Involved in requirement gathering discussions, conducting solution analysis, and contributing to the overall project design.
- Designed a user-friendly UI and implemented API callouts to enhance system functionality and improve user experience.
- Developed both frontend and backend components, with deployment and management streamlined through GitHub-based automation.

Project: Bill RTB

Client: Bill.com

Role: Salesforce Developer

Duration: 2 Months

- Developed Apex triggers and corresponding test classes to implement business logic.
- Managed deployments using Change Sets, ensuring adequate test class coverage for successful migration.

Project: Genesys CPQ Implementation and Support

Client: Genesys

Role: Salesforce Developer

Duration: 3 Months

- Involved in requirement gathering, analysis, and solution design for project tasks.
- Developed Apex triggers, classes, and worked on Conga document automation.
- Created documentation for each ticket along with effort estimates.

Smijay Technologies - August 2022 to February 2025

Project: CPQ-based Product Development

Client: Confidential

Role: CPQ Developer

Duration: 2 Months

- Conducted requirement gathering, analysis, and solution design for the project.
- Proposed UI designs to enhance user experience and usability.
- Developed Lightning Web Components (LWC) and implemented the Apex controllers.
- Worked on the CPQ object structure for the UI using custom automations.
- Assigned tasks to team members and provided clarifications to ensure smooth development.
- Acted as an intermediary between business stakeholders and developers for clear communication and requirement alignment.

Project: Apex and CPQ Implementation and Support

Client: US Based Manufacturing Sector Client

Role: Salesforce and CPQ Developer

Duration: 2 Years

- Responsible for requirement gathering.
- Coordinated with the team on proposed solutions and provided effort estimates.
- Designed solution architecture and developed Apex helper classes and custom scripts.

- Managed triggers, automations, and page layout changes, including creation of helper classes for background processes.
- Implemented field overrides and necessary mathematical operations based on updated business rules in the custom scripts.
- Developed and implemented REST API calls in the Quote Line Editor for field updates, mapping API responses to fields in real time using custom metadata tables.
- Updated custom scripts and API integrations to fetch the latest required data and align responses appropriately.
- Wrote unit test classes to ensure functionality coverage and code quality.
- Handled deployments using Change Sets and coordinated across environments for smooth rollout.
- Maintained and updated JIRA tickets according to assigned functionalities and implemented changes.

Project: Import Quote Lines

Client: Confidential

Role: Salesforce Developer

Duration: 5 Months

- Managed and resolved JIRA tickets, ensuring timely updates and delivery of assigned tasks.
- Developed Lightning Web Components (LWC) with associated Apex controllers to enhance user interaction and data processing.
- Implemented automation processes for efficient background operations, improving system performance and reliability.
- Conducted one-on-one client calls and participated in weekly calls to gather feedback and clarify ticket requirements.

Project: EazeUS

Client: Confidential

Role: Salesforce Developer

Duration: 6 Months

- Created and configured Salesforce Sites to establish secure connections with Stripe for payment processing, providing guest user access.
- Developed Apex REST classes and integrated REST APIs for seamless communication between Salesforce and Stripe.
- Implemented webhooks to receive real-time notifications from Stripe.
- Automated workflows using Salesforce Process Builder for business processes like leave management and time entry.
- Configured Custom Settings and Public Groups to manage user access and permissions.
- Conducted client calls for discussing required changes, ticket clarifications, and providing estimates.

Project: Timekeeper

Role: Full stack Developer

Duration: 4 Months

- Developed the database management and managed the version controls.
- Worked on backend and frontend development and UX development.
- Tested the products thoroughly and raised the issues and solved them simultaneously.

Smijay Technologies - October 2020 to March 2021

Project: Timekeeper

Role: Salesforce Developer

Duration: 6 Months

- Developed the solution approach and designed the project object structure for a time-tracking and leave management application.
- Implemented core functionalities and created the user interface using the Material UI framework.
- Managed version control and code collaboration using GitHub and web development tools.
- Utilized the MERN stack, incorporating HTML, CSS, JavaScript, and Material UI for front-end and back-end development.
- Conducted testing across different users, roles, and profiles to ensure application functionality and security.

Education

- Bachelor of Engineering – BE, International Institute of Information Technology, Pune – Jun 2022

Certifications

- Salesforce Certified Associate
- Salesforce Certified AI Associate
- Salesforce Certified Platform Developer I
- Salesforce Certified CPQ Administrator
- Salesforce Certified Platform Administrator
- Salesforce Certified Revenue Cloud Consultant
